## **DETAILED ACTION**

### ***Specification***

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 22 and 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 23 recites: "the device of claim 21, wherein said movement area includes one or more channels on the support. This claim fails to recite any structural relationships between the one or more channels and the elements of the movement area recited in claim 22, i.e. "a main arm and a plurality of side arms".

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 1753

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 22 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Batchelder.

The channel structure recited in the claims reads on the device of Batchelder illustrated in figure 6A. Regarding the recitation in the claims that the electrodes are in contact with the fluid, Batchelder teaches [col. 4, lines 50-55]: "Note that FIGS. 2 and 2A include insulators placed between the electrodes and the mobile dielectric materials. These are not necessary if the conductivity of the dielectric media is low enough, and if there are no detrimental interactions between the electrode material and the dielectric media.".
